

CNC MACHINER

Job description:

To expand the team we are urgently looking for an experienced CNC machiner! Do you like to be involved in de production of machines, internal transport and logistics systems for, among other things, the food processing industry. Then we have your dream job!

What are you going to do exactly?

- As a CNC machiner you are working with mainly stainless steel
- You ensure that the workpieces meet the requirements of dimensions, shape, plate tolerances and roughness
- Independent programming of the machines
- Work with both small and large series

What do we offer you?

- A varied function in an international, industrial family business
- Working together in a professional manner in an informal, no-nonsense environment where open communication predominates
- Excellent terms of employment with good growth opportunities
- Company contract when successful employment
- Salary based on experience
- Fulltime work in daytime

Who are You?

- You are in possession of at least a MBO or BBL level 3 diploma, in the direction of Machining Technology or similar.
- You have a number of years (3-10 years) relevant work experience in a similar job.
- You have knowledge and experience with CNC control technology.
- You have experience with reading technical drawings.
- You can handle the most common measuring equipment.
- You are stress resistant and accurate.
- You have a good mathematical insight.
- Good knowledge of English or Dutch

Company Profile:

Our customer designs and produces refrigeration, freezing and sorting machines for the food industry. The company is an expert in the field of vibration techniques. Stainless steel and aluminum are processed for the production of these systems.
